Education

University of Liverpool, Liverpool, UK 09/2021 – 06/2023

B.Sc. in Computer Science, GPA: 4.0/4.0 (Y3) First Class (Honors) Expected

- Relevant Courses: Software Engineering, Complexity Of Algorithms, Database Development, Decision Computational Language, Advanced Artificial Intelligence

Xi'an Jiaotong-Liverpool University, Suzhou, China 09/2019 – 08/2021

B.Sc. in Information and Computing Science, GPA: 3.8/4.0 (Top 10% in Y1, Top 10% in Y2)

- Relevant Courses: Algorithmic Foundations and Problem Solving (90%, Top 2/513), Artificial Intelligence, Data Structures, Computer Systems

Research Experience

University of Notre Dame 05/2022 – Present

HCI + NLP | Research Intern | SaNDwich Lab

Advisors: Toby Jia-Jun Li & Elena Glassman (co-advised from Harvard University)

- Aimed to establishing effective AI assistance for qualitative coding by designing an interactive human-AI collaboration system that can fit the uncertainty and ambiguity of qualitative coding.
- The proposed system can effectively recommend codes, help human users discover data characteristics and new theories, and accommodate the vague, uncertain, and iterative nature of qualitative coding.
- Helped design and develop the system and relevant algorithms; participated in designing and conducting a user study and an offline system experiment; contributed to qualitative and quantitative data analysis of the interview transcripts and the study results.

University of Liverpool 10/2021 – Present

NLP | Research Assistant | NLP@Liv

Advisor: Danushka Bollegala

- Led research to enhance dynamic word embedding that learns semantic change across time.
- Proposed a template-based method with three unsupervised tuple selection methods in terms of frequency, diversity, and context of words and two template generation methods to learn semantic change over time; evaluated the proposed method by time-adapting a pre-trained Masked Language Model (MLM) with our approach; the proposed method beat the SoTA approach.
- Contributed to propose the methods and design experiments; implemented proposed approaches and executed experiments.

Xi'an Jiaotong-Liverpool University 10/2020 – 08/2021

HCI + VR + Cybersickness | Research Assistant | X-CHI Lab

Advisors: Hai-Ning Liang & Diego Monteiro

- Aimed to identify cybersickness in a fast, precise, non-intrusive, and non-disruptive way in VR applications such as games by exploring the correlation between cybersickness and trajectory compression rate.
- Demonstrated experimentally that a machine learning approach can be used to identify changes in cybersickness using trajectory compression rate as a measurement.
- Contributed to experiment design and data analysis; programmed VR software for experiments in Unity3D and conducted experiments; participated in writing a paper and a patent.

HCI + VR + Accessibility + Gamification | Research Assistant | X-CHI Lab

Advisor: Hai-Ning Liang

- Researched ways to facilitate empathy in people with non-myopia for those who suffer from myopia through two VR games.
- Investigated users experience and empathetic feelings of the two VR games with semi-structured interviews and questionnaires.
- Programmed experimental software (games) in Unity3D; contributed to the game design, experiments design, and user study data analysis.

Massachusetts Institute of Technology 06/2021 – 08/2021

NLP + QA | Research Assistant | Computer Science & Artificial Intelligence Lab

Advisor: Hongyin Luo

- Researched a QA model that answered reading comprehension questions about written passages.
- Trained and evaluated the model in SQuAD dataset; achieved results with an EM score of 68.45% and a F1 score of 81.35%.

Academic Service

Reviewer: **CHI Late-Breaking Work** (2022, 2023)

Student Volunteer: **ACM UbiComp** (2022), **ACM DIS** (2022), **IEEE AIVR** (2020)

Selected Awards

ACM SIGCHI Gary Marsden Travel Award '22 ($3500)

University Academic Achievement Award '20 at XJTLU ($750, 10%)

Skills

Programming Languages: Python, C/C++, C#, Java, R

Tools and Frameworks: LaTeX, PyTorch, Unity3D
